ARJUN T V

+91 9497416302 | arjun1vash@gmail.com | LinkedIn | GitHub | Kannur,Kerala

PROFESSIONAL SUMMARY

MERN Stack Engineer with hands-on expertise in architecting scalable server-side architectures, RESTful APIs, and responsive web applications using Node.js, Express.js, MongoDB, and React.js. Proficient in database modeling (Mongoose ODM, SQL), JWT authentication, middleware design, and asynchronous programming. Solid foundation in Data Structures & Algorithms, Clean Architecture, and Git workflows, with a proven track record of engineering performant backend services and seamless full-stack integrations.

TECHNICAL SKILLS

- **Frontend & Full Stack:** React.js, JavaScript (ES6+), HTML5, CSS3, React Hooks, Context API, Redux Toolkit fundamentals, JSON, AJAX/Axios
- **Backend & APIs:** Node.js, Express.js, RESTful API Design, JWT Authentication, Middleware Architecture, CRUD Operations, MVC Pattern, Postman, Webhooks
- **Databases & ODM:** MongoDB, Mongoose ODM, MySQL, Database Schema Design, Indexing, Query Optimization, Aggregation Pipeline
- **Programming Languages:** JavaScript, Python, Java, C, SQL
- **Core CS & Architecture:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Microservices Concepts, Clean Code Principles, API Security
- **Tools & Methodologies:** Git, GitHub, VS Code, Postman, npm/yarn, Linux/Bash basics, Agile/Scrum Fundamentals

EXPERIENCE & PRACTICAL TRAINING

MERN Stack Web Development Trainee — Luminar TechnoLab, Kerala *June 2026 – Present*

- Engineering full-stack MERN applications by developing modular Express/Node.js backend servers and integrating React.js frontend interfaces.
- Architecting secure RESTful endpoints with input validation, JWT token-based authentication, custom error-handling middleware, and CORS management.
- Designing and optimizing MongoDB schemas and aggregation pipelines using Mongoose ODM for efficient data persistence and fast query response times.

Python & Software Engineering Intern — Revertech IT Solutions *June 2022-july 2022*

- Built automated backend Python scripts for data processing, algorithmic computation, and predictive model pipelines.
- Collaborated on database integration and API data consumption, reinforcing core OOP and clean coding practices.

PROJECTS

Campus Lost & Found Management Portal | MERN Stack (Node.js, Express.js, MongoDB, React.js, REST APIs, Git)

- Architected full-stack web application featuring secure backend RESTful APIs with Node.js and Express for managing campus lost/found item lifecycles.
- Designed normalized MongoDB database schemas using Mongoose; implemented multi-attribute indexing and search filters across categories and department tags.
- Engineered claim-verification workflows, secure image upload pipelines, form validations, and integrated responsive React.js UI with centralized Context state.

AI-Powered Vehicle Diagnostic System using Engine Exhaust sound | Python, MySQL, REST APIs, Signal Processing

- Developed backend data processing pipelines and real-time classification engine analyzing acoustic engine spectrograms via MFCC extraction algorithms.
- Structured relational MySQL schemas and implemented REST backend endpoints to log telemetry diagnostics and deliver real-time data to client applications.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering *November 2022 – April 2026*

College of Engineering, Trikaripur | APJ Abdul Kalam Technological University (KTU) • CGPA: 7.41 / 10

CERTIFICATIONS

- Full-Stack & MERN Web Development: Luminar TechnoLab — Node.js, Express, MongoDB, RESTful Architecture & React
- Python & Machine Learning Certification: Revertech IT Solutions — Algorithmic problem-solving & data processing
- React Fundamentals & Web Architecture: ICT Academy of Kerala | Self-Driving Systems Workshop: Techmaghi & IIT Kharagpur
